

WEEK 14

Question 1

Correct

Flag question

You are transporting some boxes through a tunnel, where each box is a parallelepiped, and is characterized by its length, width and height.

The height of the tunnel **41** feet and the width can be assumed to be infinite. A box can be carried through the tunnel only if its height is strictly less than the tunnel's height. Find the volume of each box that can be successfully transported to the other end of the tunnel. Note: Boxes cannot be rotated.

```
1 #include<stdio.h>
2 int main(){
3     int t;
4     scanf("%d",&t);
5     struct volume{
6         int l;
7         int b;
8         int h;
9     }s[t];
10    for(int i=0;i<t;i++){
11        scanf("%d %d %d",&s[i].l,&s[i].b,&s[i].h);
12    }
13    for(int i=0;i<t;i++){
14        int vol=0;
15        if(s[i].h<41){
16            vol=s[i].l*s[i].h*s[i].b;
17        }else{
18            break;
19        }
20        printf("%d\n",vol);
21    }
22 }
```

	Input	Expected	Got	
✓	4	125	125	✓
	5 5 5	80	80	
	1 2 40			
	10 5 41			
	7 2 42			

Question 2

Correct

Flag question

You are given n triangles, specifically, their sides a_i , b_i and c_i . Print them in the same style but sorted by their areas from the smallest one to the largest one. It is guaranteed that all the areas are different.

The best way to calculate a volume of the triangle with sides a , b and c is Heron's formula:

$$S = \sqrt{p * (p - a) * (p - b) * (p - c)} \text{ where } p = (a + b + c) / 2.$$

Answer: (penalty regime: 0 %)

```
1 #include<stdio.h>
2 #include<math.h>
3 int main(){
4     int t;
5     scanf("%d",&t);
6     struct vol{
7         int a;
8         int b;
9         int c;
10        int vol;
11    }s[t];
12    for(int i=0;i<t;i++){
13        scanf("%d %d %d",&s[i].a,&s[i].b,&s[i].c);
14    }
15    int p;
16    for(int i=0;i<t;i++){
17        p=(s[i].a+s[i].b+s[i].c)/2;
18        s[i].vol=sqrt(p*(p-s[i].a)*(p-s[i].b)*(p-s[i].c));
19    }
20    for(int i=0;i<t-1;i++){
21        for(int j=i+1;j<t;j++){
22            if(s[i].vol>s[j].vol){
23                struct vol temp=s[i];
24                s[i]=s[j];
25                s[j]=temp;
26            }
27        }
28    }
29    for(int i=0;i<t;i++){
30        printf("%d %d %d\n",s[i].a,s[i].b,s[i].c);
31    }
32 }
```

	Input	Expected	Got	
✓	3 7 24 25 5 12 13 3 4 5	3 4 5 5 12 13 7 24 25	3 4 5 5 12 13 7 24 25	✓
